

FORAGE MAIZE

**NEW
ULTRA EARLY**

EMMERSON (ULTRA EARLY FAO 150)

Setting new standards for Ultra Early Maize, **1st choice listed.**

Ultra Early without the associated yield penalties. Well proven on farm and in 3 years of official trials.

Suitable for all marginal growing needs or where harvest date is of prime importance.

Characteristics

| | | |
|---------------------------|------|-------------|
| Maturity | 12 | Ultra Early |
| Dry Matter Yield % | 96 | Average |
| Dry Matter % | 38.3 | Very High |
| Starch Content % | 36.9 | High |
| ME (MJ/kg) | 11.6 | Very High |
| Cell Wall Digestibility % | 56.3 | High |

NIAB figures

Benefits

- Offers greater yields than any other Ultra Early Maize
- Best standing power and cob retention in its category
- 5 % additional yield advantage over current earliest variety
- Early whole plant dry down, combined with cob ripeness, DM yields and forage quality
- 37 days earlier to harvest than the latest listed variety, 10.6 % drier on the same day
- Well above average starch yields from the early cob ripeness at 5.5 t/ha
- Excellent early vigour, standing power and disease resistance
- Produces well filled cobs reducing the risk of microtoxin contamination in the clamp
- Good all round disease-resistance
- An improvement on Kentaurus going forward
