

FORAGE MAIZE

KONSENSUS (MAINSTREAM F.A.O 200)

A very robust and proven hybrid bred by KWS, with high yield potential.

The 1st of a new generation of breeding with fully enclosed and protected cob.

Konsensus is ideal for rations involving high portions of maize silage and anaerobic digestion.

Characteristics

Maturity	8	Mainstream
Dry Matter Yield %	115	Very High
Dry Matter %	33.3	High
Starch Content %	34	High
ME (MJ/kg)	11.5	Very High
Cell Wall Digestibility %	57.6	Very High

NIAB figures

Benefits

- Highest yielding grain variety on the NIAB list
- High starch levels ensure a energy dense diet
- High ME yields and improved cell wall digestibility allows high feeding levels
- Early cob ripeness and starch laydown producing high energy content forage
- Konsensus shows very good early vigour along with good standing power
- Combines high dry matter with moderate stay green characteristics
- Good stay green for high whole plant digestability (over 71%)
- A bold plant with excellent early vigour
- Very good standing power at harvest
- Well suited to biogas production

MesuroI & Thiram treated, 50,000 seed packs
