

# FORAGE MAIZE

## **(EARLY F.A.O 180)**

A very robust hybrid showing well above average digestibility with high starch yields.

Likelt shows early maturity with excellent all round disease resistance.

Likelt presents an exceptionally large cob which is fully enclosed

Maturity	8/9	Mainstream
Dry Matter Yield %	104	High
Dry Matter %	34.3	High
Starch Content %	33	High
ME (MJ/kg)	11.3	High
Cell Wall Digestibility %	60	Very High

NIAB figures

### Benefits

- Likelt shows very good early vigour combine good standing power
- Highest cell wall and whole plant digestibility %'s in UK National List Trials
- Good all round disease tolerance including Eyespot and Fusarium
- Likelt is bred from Europe's most proven breeding programme
- Proven to be suitable for a wide range of growing and soil situations
- A versatile variety which is reliable for forage, energy and grain production
- Likelt's high energy density is ideal for rations involving high proportions of maize silage and anaerobic digestion.
- **Limited seed availability for 2018**

**Mesuroil & Thiram treated, 50,000 seed packs**
