

HUSBANDRY GUIDELINES NECTAR RICH GOLD (AB1)

GAME COVER & STEWARDSHIP SEED

Seed Rate: 5kg/acre 12Kg/Ha

Description: A well proven legume and wildflower mixture

Duration: 4 - 5 Years

Use: Feed and Cover source for a variety of insects including bumble bees also beneficial for farmland birds.

Drill or Broadcast: Either, although drilling is preferable

Time of Sowing: March / April or August / Early September

Row Width: 10 cm

Depth of Sowing: 0.5cm or less

Soil Type: Thrives on various soil types, min pH 6

Seed Bed Preparation: Aim to achieve a firm, fine, seed bed and roll the seeds in

Fertiliser: Not Required

Pesticide and Herbicide Control: To ensure a successful establishment and continued growth, effective / appropriate initial weed control is essential. A stale seedbed would always be the best approach using Glyphosate.

Nectar Rich Gold is a prolific pollen producing mixture, non-grass content helps in fertile conditions or where grass weeds persist.

May require topping hard in the 1st year to encourage rooting and tillering along with suppressing annual weeds.
